New Engineering and Design Firm Opens in Philadelphia Market

Company offers clients what others don't: inspection, engineering and design services under one roof

May 3, 2016, Logan Township, NJ.... Allied Engineering and Design – AED –

www.AlliedED.com) offers what few of their competitors can; a wide-range of services that meet all aspects of a clients' needs. Allied Engineering & Design provides inspection, engineering and design solutions to companies in the general manufacturing, public utility, refining, chemical and pipeline industries.

"A part of the Allied Resources Group, AED was formed to complement our existing services groups which include technical staffing and inspection," commented Dennis Zatlin, President.

"Our customer base in the energy market has a growing need for a total project solution provider and AED is well positioned to fill that gap."

Led by Curt Schellinger, P.E., Vice President, the AED staff has over 30 years of engineering and design experience – from conception through construction. "I am thrilled to have Curt lead the AED team. His experience spans the Chemical, Petrochemical, Pipeline, Power, Transportation and Storage (gasoline terminals, truck racks, and tank farms) Industries," stated Zatlin. "He has worked on the consulting side and owner side of the engineering business which provides him a unique insight and full understanding of the requirements of both."

<<more>>

AED offers a broad spectrum of inspection, design and engineering services: civil, structural, mechanical, electrical, instrumentation, process design, project management, 3D piping design and laser scan surveying. Capabilities span small to medium sized projects as well as multi-discipline and complex jobs. Further, AED utilizes the latest 3D CAD technology to visualize and test for interferences to avoid costly mistakes in the field.

“Our process is a proven partnership approach. We take the time, up front, to understand our clients’ business needs and then provide solutions in inspection, design, engineering and even technical staffing. Then, we implement our recommendations. This tactic makes it easier and more cost-effective for our clients,” concluded Zatlin.
